

Aluminium Bubble Sheet

Product information sheet

EIC-27 • Thermal Insulation

Aluminium Bubble Sheet

Aluminium Bubble Sheet is a lightweight, flexible insulation material made by combining air-bubble film with a reflective aluminium foil layer on one or both sides.

Material: Aluminium

Primary use: The main purpose of Aluminium Bubble Sheet is heat insulation and radiant heat reflection in roofing, walls, and ducting systems — helping to keep interiors cooler in summer and reduce heat loss in winter.

Product overview

Aluminium Bubble Sheet is a multi-layer insulation material made by sandwiching a layer of air-bubble film between two (or one) layers of reflective aluminium foil. This combination gives it dual insulation properties — the aluminium foil reflects radiant heat, while the trapped air bubbles provide thermal resistance (conductive/convective insulation). It is lightweight, flexible, waterproof, and easy to install, making it a popular choice for both residential and industrial insulation needs.

Applications

- Roof insulation (metal sheds, warehouses, factories)
- Wall & ceiling insulation
- HVAC ducting insulation
- Cold storage & container insulation
- Under-deck insulation for terraces

Key features

- Reflects up to 97% of radiant heat
- Lightweight, flexible & easy to install
- Waterproof & moisture resistant
- Good sound insulation properties
- Durable and long-lasting
- Fire retardant grades available

Available options / specifications

Contact EIC for available specifications. Share your size, thickness and quantity and EIC will confirm the options available for Aluminium Bubble Sheet.
